Technical specifications

Crystal Frequency:	4,915200 MHz.
Accuracy:	0,1 sec./24 hours (at +20°C).
Microprocessor:	HD6412394.
Max. load impulse output:	Minute 1A, second 0,5A. (The output is equipped with short circuit protection which resets automatically.)
Impulse duration:	Minute 2 sec. selectable 0.1-9.9 sec. Seconds 0.5 sec. selectable 0.1-1 sec.
Impulse memory: (in sync. mode)	72 hours (impulse memory with rapid impulsing after power failure).
Connection voltage:	230 V 50 Hz -5% +10%
Power consumption:	30 VA.
Ambient temperature:	Between 0°C and +40°C.
Relative humidity:	Max. 85% non-condensing.
Case:	IP 65, light grey plastic (Polystyrol) with transparent protection cover.
CE-Approval, EMC	Emission acc. to EN61000-6-3, Immunity acc. to EN61000-6-2.
Art. numbers:	123314-00 (230V AC)

General description

The WDP-AMP is an electronic quartz Impulse Amplifier for operating and control of analogue and digital Slave Clocks. The impulse amplifier is intended for amplification of polar reversing impulses or hard wired DCF Time Code, TC, and it can work in sync. or slave mode.

The unit is equipped with electronic fuse and transient protection. The electronic fuse is tripped in case of overload on the impulse output. After resetting the alarm, the connected clocks are set to the correct time by rapid impulses.

In case of power failure the built in Real Time Clock keeps the internal time updated.

Connected Slave Clocks are automatically corrected by rapid impulsing when power returns.

Summer/winter time correction (daylight saving) is pre-programmed and, if the amplifier is used in sync. mode, the correction is done fully automatic.

Installation

The Impulse Amplifier is intended for wall mounting.

1. Screw in the upper fixing screw halfway and hang up the unit.
2. Screw in the two lower screws, accessible under the connection space cover.
3. Connect the slave clock lines.
4. Connect the supply voltage.

Calculation of cable area in time systems

General

To make a time system with impulse operated analogue and digital slave clocks perform satisfactory, the cable from the Impulse Amplifier to the Slave Clocks need to be dimensioned correctly.

A 10% voltage drop is allowed in the cable.

The length and area of the cable and also the current (load) on the cable affect the voltage drop.

Formula

$$A = l \times I \times k$$

A = Area [mm²]

l = cable length [m]

I = current [A]

k = 0,015 [constant]

Power consumption

Impulse Slave Clocks

Analogue clocks minute \leq 400 mm: 7,5 mA

Analogue clocks minute \leq 900 mm: 15 mA

Analogue clocks minute + sweep seconds hand \leq 400 mm: 25 mA

Digital Clocks: 4 mA

Time-Code (TC) Slave Clocks

Analogue clocks minute \leq 400 mm: 14 mA

Analogue clocks minute \leq 900 mm: 20 mA

Analogue clocks minute + sweep seconds hand \leq 400 mm, indoor: 12 mA

Analogue clocks minute + sweep seconds hand \leq 400 mm, outdoor: 20 mA

Analogue clocks minute + sweep seconds hand \leq 900 mm: 27 mA

Example

A time system consists of 40 pcs. analogue clocks with diameter 300 mm.

The power consumption will then be $40 \times 7,5 = 300 \text{ mA} = 0,3\text{A}$.

Cable length is 100 metres.

$$A = 100 \times 0,3 \times 0,015 = 0,45 \text{ mm}^2$$

Choose a cable with an area of at least $0,45 \text{ mm}^2$.

Synchronisation input

General

The Impulse Amplifier is equipped with a synchronisation input intended for connection to an external synchronisation source. The synchronisation source can be a Master Clock transmitting polar reversing impulses or hard wired DCF Time Code, TC.

The amplifier can work in either synchronisation (sync) or slave mode.

Glossary

Sync. mode: The Amplifier will continue to send out pulses even if the synchronisation source is defect.

Slave mode: The Amplifier will stop sending out pulses if the synchronisation source is defect.

The Impulse Amplifier is factory prepared for sync. mode.

Remark

When using sync. mode it is essential that the time and date is correctly entered when the Impulse Amplifier is started for the first time.

Entered time must not differ more than +/- 30 seconds compared to the time of the Master Clock.

The date information is used by the amplifier to do the summer/winter change.

1. Programming

General

Using 6 buttons and a 2-row 16-character display carries out all programming. Programming is self-instructive and to simplify the dialogue Yes/No questions are used.

Running mode

When the Impulse Amplifier is in operation it shows date and time in the display.

This is called *running mode* in this documentation.

LTs = Local Time summer.

LTw = Local Time winter.

MON 14 MAR 2011
10:11:00 LTw

- | | |
|------------------------------|-----|
| 1- Select function | ↑↓ |
| 2- Enter programming mode | YES |
| 3- Move sideways | ← → |
| 4- Change/scroll | ↑↓ |
| 5- Accept | YES |
| 6- Cancel / Leave prog. mode | ← |

Start up

STARTING

LANGUAGE
ENGLISH?

When the Impulse Amplifier is connected for the first time correct/requested language has to be entered. Press **NO** until requested language occurs in the display e.g. English. Accept with **YES**.

COUNTRY
FIN ?

Press **NO** until correct country code occurs.
For Finland, select FIN. Accept with **YES**.

SET TIME
110314 09:07

Set, by using the arrows, the right time format i.e. year, month, day and hour but a few minutes in advance.
Wait for the right time and synchronise using **YES**.

SLAVE CLOCK
= 12:00 OFF

Now the question: SLAVE CLOCK 12.00?
If the Slave Clocks show 12.00, answer **YES**, if not set the time shown by the slave clocks. Accept using **YES**.

SLAVE CLOCK
= 12:00 **ON?**

Accept using **YES**.

MON 14 MAR 2011
09:07:00 LTW

The Impulse Amplifier is now in running mode.

NOTE! If a slave clock runs out by a minute, its cabling must be pole changed and the slave clock to be corrected manually.

NOTE! If the time of the slave clocks is ahead of correct/present time the Impulse Amplifier Programmer will wait until correct time corresponds with the slave clocks.

WESTERSTRAND URFABRIK AB

P.O. Box 133
SE-545 23 TÖREBODA

Tel. +46 506 48000
Fax. +46 506 48051

Internet: <http://www.westerstrand.se>
E-mail: info@westerstrand.se

Set time when in operation

MON 14 MAR 2011 09:07:00 LT _w	Select function using ↓.
SET TIME	Enter the programming mode with YES.
SET TIME 110314 10:13	Set, by using the arrows, the right time. Format; year, month, day and hour but a few minutes in advance. Wait for the right time and synchronise using YES.
SET TIME	Leave programming mode by pressing ← several times.
MON 14 MAR 2011 10:13:00 LT _w	The Impulse Amplifier is now back in running mode.

Summer to winter (Day light saving)

Resetting between summer and wintertime is fully automatic and does not need programming.

WESTERSTRAND URFABRIK AB

P.O. Box 133
SE-545 23 TÖREBODA

Tel. +46 506 48000
Fax. +46 506 48051

Internet: <http://www.westerstrand.se>
E-mail: info@westerstrand.se

Slave Clock

This function is used to enter the time that the slave clocks are showing.

This is useful if, by some reason, the Impulse Amplifier and the slave clocks should show different times.

When the slave clock time has been entered, the Impulse Amplifier will automatically adjust the slave clocks to correct time.

Please note that before using this function make sure that all connected slave clocks are showing the same time. If any of the slave clocks are showing a divergent time this clock must be manually adjusted to the same time as the other clocks.

The impulses to the slave clocks are temporarily stopped when entering this function.

MON 14 MAR 2011
09:07:00 LT_w

Select function using ↓.

SLAVE CLOCK

Enter the programming mode with **YES**.

SLAVE CLOCK
= 09:07 OFF

SLAVE CLOCK = 09.07? (Example)
If the slave clocks shows 09.07 answer YES,
if not, set the time shown by the slave clocks.

SLAVE CLOCK
= 09:07 OFF

YES.

SLAVE CLOCK
= 09:07 **ON?**

YES.

SLAVE CLOCK

Leave programming mode by pressing ← several times.

MON 14 MAR 2011
09:07:00 LT_w

The Impulse Amplifier is now back in running mode.

Alarms

The Impulse Amplifier is equipped with several supervision facilities to detect functional disturbances. When a functional disturbance is detected the following will happen:

- Red alarm LED is lit.
- Alarm relay* is activated.
- An alarm message is displayed in function ALARM.

The function ALARM is used to display and erase (clear) alarm messages.

Type of alarm	Indication	Reason for alarm	Action
NO RADIO	Red alarm LED lit.	The synchronisation signal is lost.	Check the incoming synchronisation signal. If OK, clear the alarm.
UF LOW	Red alarm LED lit.	Impulse voltage below alarm limit.	Check the load on the impulse output. If OK, clear the alarm.
SHORT CIRCUIT	Red alarm LED lit.	Short circuit on impulse output	Remove the short circuit. If OK, clear the alarm.
CURRENT LOW	Red alarm LED lit.	Impulse current below alarm limit.	Check the load on the impulse output. If OK, check that the alarm limit is correctly configured. If OK, clear the alarm.
CURRENT HIGH	Red alarm LED lit.	Impulse current above alarm limit.	Check the load on the impulse output. If OK, check that the alarm limit is correctly configured. If OK, clear the alarm.
POWER DOWN	Red alarm LED lit. Works only if the Impulse Amplifier is equipped with batteries for running reserve.	By some reason the power to the Impulse Amplifier has been switched off.	Check the mains. If OK, clear the alarm.

Setup sync. source

Below is a description of the different configuration parameters available in the setup menu for *sync. source*. Please remark that if default settings are used no configuration is needed.

Type of synchronisation

State type of external synchronisation. The following time sources can be selected:

-----	No external synchronisation.
1/1M SYNC	Polarised 1/1-minute impulse, sync.
1/1M SLAVE	Polarised 1/1-minute impulse, slave.
1/2M SYNC	Polarised 1/2-minute impulse, sync.
1/2M SLAVE	Polarised 1/2-minute impulse, slave.
TC	Time code type hard wired DCF.

Alarm limit

The configuration parameter *Alarm limit* specifies the time delay before the radio alarm is activated. Default setting is that the radio alarm is inactivated, AL.LIMIT --h--m.

Setup impulse output

Below is a description of the different configuration parameters available in the setup menu for *impulse output*. Please remark that if default settings are used no configuration is needed.

Impulse type

Type of impulse

Selection of impulse type. The following types are available.

- 1/1M-24H : Polarised 1/1-minute impulse with 24 hours resetting.
- 1/1M-12H : Polarised 1/1-minute impulse with 12 hours resetting (default).
- 1/2M-24H : Polarised 1/2-minute impulse with 24 hours resetting
- 1/2M-12H : Polarised 1/2-minute impulse with 12 hours resetting.
- SEC-12H : Polarised Second impulses with 12 hours resetting.
- TC : Hard wired DCF Time Code.
- TC-POL : Polarised hard wired DCF Time Code.
- : No impulse system.

Type of time

LT = Local Time.

NT = Normal Time (winter time).

UTC = Universal Time Coordinated.

WESTERSTRAND URFABRIK AB

SE-545 23 TÖREBODA

Tel. +46 506 48000
Fax. +46 506 48051

Internet: <http://www.westerstrand.se>
E-mail: info@westerstrand.se

Impulse length

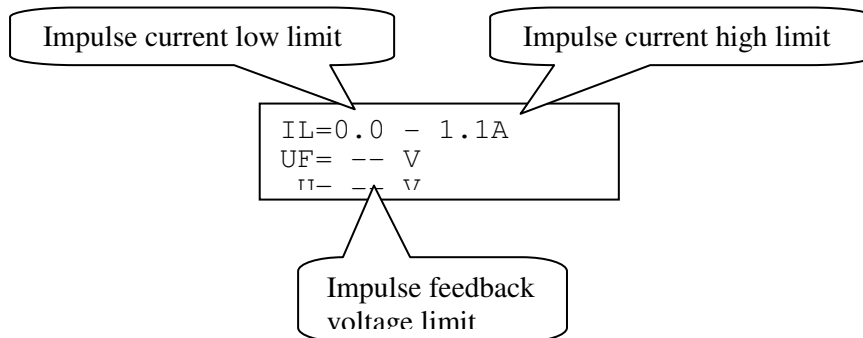

Configuration of impulse length.

1/1 and 1/2 -minute impulse: 0.1 s – 9.9 s.
Second impulses: 0.1 – 1.0 s.

Remark:

When selecting second impulses with pulse length > 0.5 seconds, the pulse length for rapid impulses is automatically adjusted to 0.5 seconds.

Alarm limits

Impulse current low limit

Alarm limit for low current (minimum load). The minimum load can be set from 0A up to 1.1A.

Impulse current high limit

Alarm limit for high current (maximum load). The maximum load can be set from 0A up to 1.1A.

Impulse feedback voltage limit

Alarm limit for feedback impulse voltage.

-- : No limit (default).
01 - 99 : Limit in volts, V.

Fault tracing

The display is blank

- A. The green LED "POWER" is light?
 - A1. No.
 - A1A. Check the supply voltage.
 - A1B. Power supply wires connected correctly?
 - A2. Yes.
 - A2A. Restart the Impulse Amplifier by switching the supply voltage off and on.

After starting up the Impulse Amplifier, no impulses appear (to correct the slave clocks).

- B1. The Impulse Amplifier awaits the time shown by the slave clocks. Impulses will be distributed when correct time = the time shown by the slave clocks.

Alarm messages

- D1. "Short circuit"

Excessive load on the impulse output. Check the slave clock wiring. Impulses are stored (memorised) during the alarm. When the fault is fixed, all the stored impulses are distributed by rapid impulsing.

Synchronisation

Synchronisation is not working

Check that the LED, marked with an antenna symbol, lights every time an impulse is received. If not check the connections and if needed measure the incoming pulse with a DVM. Use special functions "Status sync. source" for information on the reception quality.

Accepted reception is shown by a flashing colon (:) between hours and minutes in the display.
